

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 10/04/2018

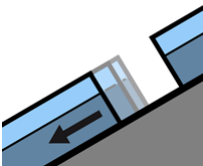

Avalanche Problems

Wet Snow

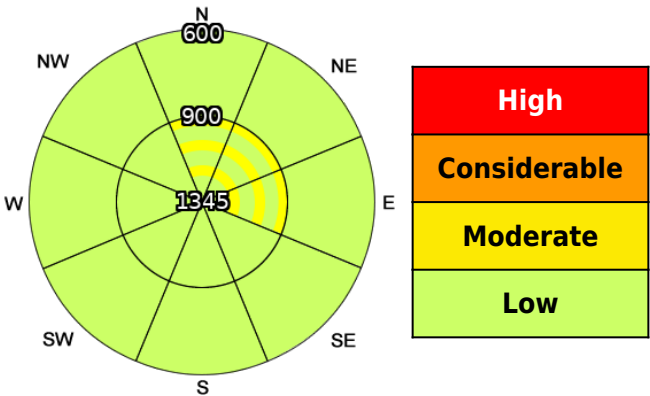

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to slowly thaw and consolidate at all levels. Localised wet snow surface instabilities will be present on very steep slopes with North to East aspects above 900 metres most affected. Many large cornices remain and will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

Fresh South-East wind soon backing East-North-Easterly. Mainly dry. Freezing level dropping below summit level overnight before rising to around 2000 metres during the day.

Comments

Remaining mild for the next few days.
