

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 19/12/2018

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Cooler, drier conditions will improve stability on all aspects and at all altitudes. A trace of new snow is possible on North aspects later but new accumulations expected to be trivial. The avalanche hazard will be Low.

Forecast Weather Influences

Generally dry and becoming much cooler. A few light snow showers are possible very late in the forecast period. Moderate to strong Southerly winds, later South-Easterly.

Comments

Summit air temperatures projected to fall to -2 by mid morning.
