

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 31/12/2018

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The limited moist snowpack will continue to thaw and consolidate in all areas and be generally stable. Greatest depth will remain on North-West to Northerly aspects above 1000 metres, mostly around crag aprons and corrie back walls. Many other areas will remain bare of snow. The avalanche hazard will be Low.

Forecast Weather Influences

It will be dry for most of the forecast period followed by rain at all levels by the end of the day. Winds will be strong West-South-Westerly throughout and the freezing level will remain above the summits.

Comments

Continuing mild up until Tuesday, when cooler temperatures are expected.
