

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 04/01/2019

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The very sparse snowpack primarily around coire rims on North to East aspects will remain frozen and well stabilised in all locations. The avalanche hazard will be Low

Forecast Weather Influences

Dry, cold and overcast with light to moderate West South West winds.

Comments

High pressure inversion conditions. Good visibility possible as highest summits emerge from a sea of clouds…maybe? Excellent, fast, high level walking conditions at the moment.
