

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sat 05/01/2019 TO 18:00HRS Sun 06/01/2019**

| Hazard Level        | Avalanche Probability                                                                                                                        |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Very High</b>    | Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.            |
| <b>High</b>         | Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected. |
| <b>Considerable</b> | Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.    |
| <b>Moderate</b>     | Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.                                       |
| <b>Low</b>          | Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.                            |

**Forecast Weather Influences**

A mild night is expected with some light rain at all levels. Through the day it will be dry with the freezing level slowly dropping. Winds will be generally light and quite variable in direction.

**Forecast Snow Stability and Avalanche Hazard**

The snowpack will remain patchy in extent. It will become damp overnight in the milder conditions. Through the day it will slowly consolidate as the temperature drops. Stability will remain good throughout. The avalanche hazard will be Low.

**Observed Avalanche Hazard - Sat 05/01/2019**

**Observed Weather Influences**

It was a dry day with light South-Westerly winds. The freezing level was around 750 metres.

**Observed Snow Stability and Avalanche Hazard**

The existing snowpack is patchy in extent and found mainly above 900 metres. What does exist is firm and stable. Stability is generally good. The avalanche hazard is Low.

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Patchy cover of firm snow above 900 metres. Clear on tops, cloudy at lower levels. Winds approx 10mph or less.

**Comments**

Windy unsettled conditions expected at the beginning of next week. Hopefully we will get a bit of snow out of it!
