

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 12/01/2019

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

New snow amounts are not expected to be significant or extensive, generally a dusting over the summits. Any new accumulations will start to thaw in the afternoon as rain and a rise in freezing level become established. The old patchy snowpack will remain limited in extent and mainly found above 900 metres. Deposits that exist will remain well bonded and stable. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight, rain showers at all levels these will turn more wintry during the day falling as light snow above 800 metres. The winds will be strong from the West then West-North-Westerly direction. The freezing level falling to around 1000 metres.

Comments

Freezing levels lowering again on Sunday with snow showers down to 800 metres.
