

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Fri 11/01/2019 TO 18:00HRS Sat 12/01/2019

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Overnight rain turning to snow at higher elevations from the early hours and continuing into the afternoon. Strong Westerly later West-North-Westerly winds. Freezing level falling from well above summits to 900 metres by morning and rising slowly later.

Forecast Snow Stability and Avalanche Hazard

Some humid windslab may form on steep, sheltered North- East through East to South-East aspects by the end of the afternoon. Accumulations expected to be thin, limited in extent, generally well stabilised and confined to very sheltered locations above 900 metres. Elsewhere there will be a cosmetic cover of fresh snow. The avalanche hazard will be Low.

Observed Avalanche Hazard - Fri 11/01/2019

Observed Weather Influences

Mild and generally dry at all elevations. Moderate West- South-Westerly winds.

Observed Snow Stability and Avalanche Hazard

Sparse patches of old snow only at summit elevations. These are well bonded and stable. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

Very little snow now. Cloud base was at 750 metres all day. Winds 20-30 mph progress difficult at times with stronger gusts
