

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sat 12/01/2019 TO 18:00HRS Sun 13/01/2019**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

It will be a mild night with some rain at all levels. Through the morning the freezing level will drop to around 900 metres. There will be some snow showers.

**Forecast Snow Stability and Avalanche Hazard**

The existing snowpack will remain patchy and stable. Some fresh deposits are expected above 800 metres; however, these are expected to be very shallow and generally stable. The avalanche hazard will be Low.

**Observed Avalanche Hazard - Sat 12/01/2019**

**Observed Weather Influences**

It remained mild with the freezing level around 1200 metres during the morning, then rising through the afternoon. Some wet snow fell on the highest tops during the morning.

**Observed Snow Stability and Avalanche Hazard**

The existing snowpack is patchy, well consolidated and stable. There were some deposits of fresh wet snow on the highest summits. However, these were not significant. The avalanche hazard is Low.

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Limited snowpack. Cloud base was at 700 metres all day. Winds 30-40 mph.

**Comments**

Turning a little bit cooler on Monday.
