

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Fri 18/01/2019 TO 18:00HRS Sat 19/01/2019

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will be cold and dry with light Easterly winds. Freezing levels around 800 metres.

Forecast Snow Stability and Avalanche Hazard

Localised areas of moderately bonded snow will be present but restricted to steep scarp slopes with a North, North-East and East aspect above 1000m. Elsewhere the snowpack will be thin and generally stable. The avalanche hazard will be Moderate

Observed Avalanche Hazard - Fri 18/01/2019

Observed Weather Influences

A cold and dry day with increasingly strong South-Easterly winds.

Observed Snow Stability and Avalanche Hazard

Localised areas of moderately bonded snow are present, but are generally restricted to steep North, North-East and East facing scarp slopes above 1000m. Elsewhere the snowpack is thin and generally stable. The avalanche hazard is Moderate

Mountain Conditions

Observed Mountain Travel Conditions

Cold with increasing South-Easterly winds

Comments

Light winds expected with continuing dry and cold conditions
