

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 26/01/2019

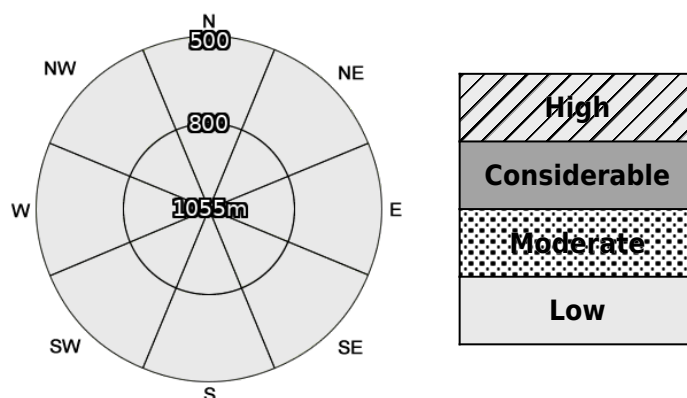

Avalanche Problems

Wet Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will be moist and continue to thaw at all levels for most of the period. Wet snow instabilities will be present on steep slopes, mainly on North through East to South-East aspects above 800 metres. During the later afternoon some windslab may begin to develop in sheltered areas, mainly on North to East aspects above 900 metres but accumulations are not expected to gain depth. The avalanche hazard will be Low.

Forecast Weather Influences

Winds will be moderate Westerly this evening; strong South-South-Westerly in the morning and easing in the afternoon. After some snow on higher summits this evening precipitation will turn to heavy rain at all levels overnight, continuing through the morning. During the later afternoon the freezing level will drop below the summits with some snow.

Comments

Please note there is some uncertainty about when the freezing level will lower during the afternoon and it may be earlier than indicated.
