

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 29/01/2019

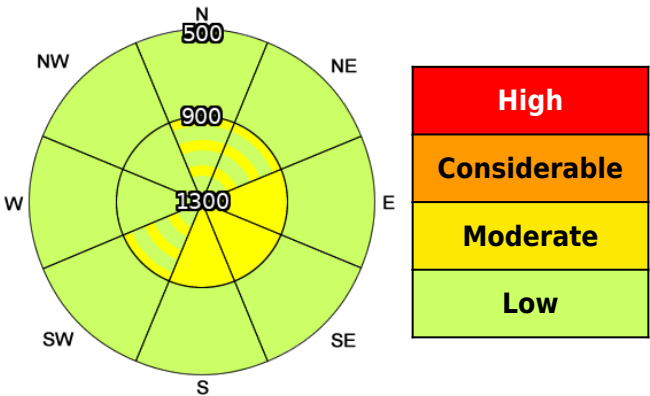

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Some drifting at higher levels leading to localised windslab accumulations developing on North to East aspects above 900 metres. Areas most affected will be around the tops of gullies and corrie rims. Moderately well bonded windslab will remain in steep and convex areas on East through South to South-West aspects above 900 metres. The avalanche hazard will be Moderate.

Forecast Weather Influences

Remaining very cold with light snow showers overnight on moderate to strong West-South-Westerly winds. During the day it will be dry and the South-Westerly winds will ease a little. The freezing level will gradually fall from 500 to 200 metres by the end of the day.

Comments

Cold weather set to continue for the rest of the week.
