

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 01/02/2019

Avalanche Problems

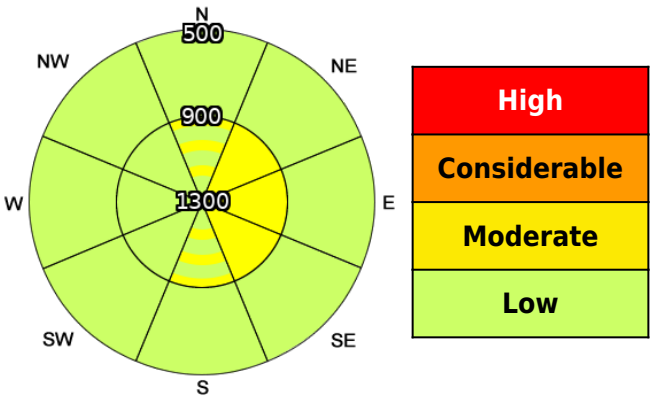

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Instabilities persisting within the snowpack on North-East to South-East aspects above 950 metres, generally localised on North aspects. Most affected areas will be around steep convex terrain, corrie rims and gully exits. Some drifting snow mostly during the afternoon with new unstable windslab developing on steep and sheltered Easterly to Southerly aspects above 900 metres. Avoidable pockets of instability on these aspects at lower levels. The avalanche hazard will be Moderate.

Forecast Weather Influences

A dry clear night with light variable winds. First thing in the morning light snowfall is expected, this will clear for a spell before more light snowfall arrives during the afternoon. Moderate North-West winds will increase moderate to strong later in the day. The freezing level will generally be around 300 metres.

Comments

Expect some drifting through the afternoon as the winds picking up.
