

**THE AVALANCHE HAZARD WILL BE MODERATE**

**Avalanche Hazard Forecast for Friday 01/02/2019**

**Avalanche Problems**

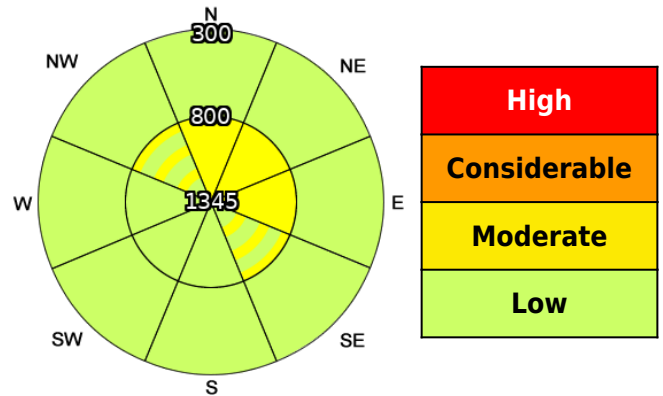

Persistent Weak Layers

Cornices

**Forecast Snow Stability & Avalanche Hazard**

Moderately to weakly bonded windslab will persist, mainly on North to East aspects above 800 metres, though North-West and South-East aspects will also be affected. Deeper accumulations will be generally fairly localised; gullies, coire rims, crag aprons and scarp slopes will be most affected. Fragile cornices will be present mainly above North to South-East aspects. Redistribution of snow during the period may deposit some soft windslab onto other aspects. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

It will remain cold and dry throughout the period. Winds are expected to be light, East-North-Easterly overnight and during the morning, North-North-Westerly from midday.

**Comments**

Remaining cold.
