

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Saturday 09/02/2019****Avalanche Problems****Wind Slab****Persistent Weak Layers****Forecast Snow Stability & Avalanche Hazard**

Existing snow cover above 800 metres will be stable and become increasingly firm throughout the day. New moderately bonded accumulations will develop in steep sheltered features such as gully tops, scarp slopes and corrie rims on North through East to South-East aspects. Elsewhere, snow will continue to thaw but remain stable. Many areas will become bare. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Overnight snowfall above 800 metres. Winds initially will ease slightly before veering and strengthening from the West during the day.

Comments

A return to cooler conditions but likely to be poor day on the hill.
