

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Mon 11/02/2019 TO 18:00HRS Tue 12/02/2019**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

South Westerly winds will increase during the period. The freezing level will rise above the summits and there will be rain at all levels.

**Forecast Snow Stability and Avalanche Hazard**

Wet snow instabilities will be present mainly on steep North, North-East and East aspects above 900m as the freezing level rises. As the day progresses, stability will gradually improve. Remaining cornices will be unstable and prone to collapse. The avalanche hazard will be Considerable

**Observed Avalanche Hazard - Mon 11/02/2019**

**Observed Weather Influences**

Cold and dry with light to moderate South Westerly summit winds

**Observed Snow Stability and Avalanche Hazard**

Areas of moderately bonded windslab are present, greatest accumulations are on steep North, North-East and East aspects above 900m. On wind exposed slopes, the snowpack is frozen and stable. The avalanche hazard is Moderate

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Cold and clear today with light summit winds

**Comments**

Wet and windy conditions expected on Tuesday
