

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Mon 11/02/2019 TO 18:00HRS Tue 12/02/2019**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

The temperature will rise through the period with the freezing level rising well above the summits. Showers, falling as snow on the summits initially, will soon turn to rain at all levels. Strong South-South-West wind throughout.

**Forecast Snow Stability and Avalanche Hazard**

The snowpack will start to soften and thaw at all levels but will remain generally stable on all aspects. Any cornices will be prone to collapse. The avalanche hazard will be Low.

**Observed Avalanche Hazard - Mon 11/02/2019**

**Observed Weather Influences**

It was a dry day with light Southerly winds. The freezing level was around 700 metres.

**Observed Snow Stability and Avalanche Hazard**

On all aspects the older snowpack is frozen hard and is stable. Localised accumulations of fresh snow were observed mainly on East to South aspects above 600 metres but amounts were not significant. The avalanche hazard is Low.

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Very firm snow on all aspects. Good visibility. Winds approximately 10mph.

**Comments**

Very hard snow today. Warmer conditions due for the rest of the week.
