

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Wed 20/02/2019 TO 18:00HRS Thu 21/02/2019

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will remain warm with the freezing level above the summits. Dry with moderate to strong Southerly winds over the summits.

Forecast Snow Stability and Avalanche Hazard

The snowpack will continue to thaw and consolidate at all levels. Snowpack stability will be generally good however localised wet snow instabilities will be present on some steep North, North-East and East aspects above 900m. Remaining cornices will be prone to collapse. The avalanche hazard will be Low

Observed Avalanche Hazard - Wed 20/02/2019

Observed Weather Influences

Heavy rain at all levels with strong South-Westerly winds

Observed Snow Stability and Avalanche Hazard

The snowpack is thawing and consolidating at all levels. Localised instabilities are present on some steep North, North-East and East aspects above 900m. The avalanche hazard is Low

Mountain Conditions

Observed Mountain Travel Conditions	Wet snow throughout Winds 30 -40 mph
Comments	Continuing thaw conditions
