

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 24/02/2019

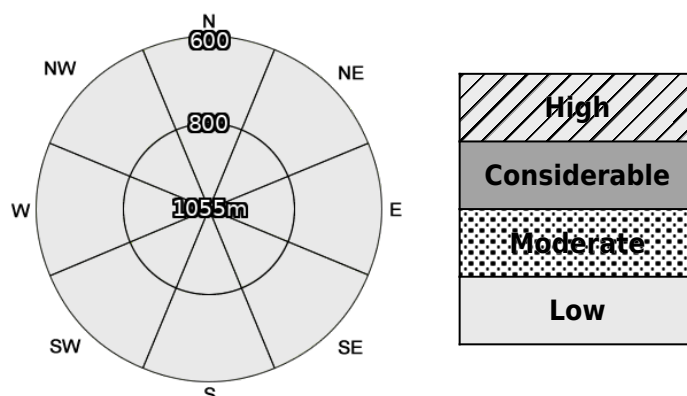

Avalanche Problems

Wet Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to diminish. Although wet and thawing the snowpack will remain well bonded and stable. Most snow remains above 750 metres on North through East to South-East aspects. The avalanche hazard will be Low.

Forecast Weather Influences

South-South-West gale force winds will decrease in strength overnight and then gradually increase in strength throughout tomorrow becoming strong Southerly. The freezing level will be around 1200 metres at first then rising abruptly by the early hours to remain well above summit levels. The occasional light shower this evening, dry tomorrow.

Comments

Many snow patches remain firm on the surface. Natural rock fall is occurring with the potential to accidentally dislodge loose rocks on paths and steeper ground.
