

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 03/03/2019 TO 18:00HRS Mon 04/03/2019

| Hazard Level | Avalanche Probability |
|--------------|--|
| Very High | Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected. |
| High | Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected. |
| Considerable | Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible. |
| Moderate | Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places. |
| Low | Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain. |

Forecast Weather Influences

Moderate Westerly winds with occasional snow showers above 600m.

Forecast Snow Stability and Avalanche Hazard

Localised areas of unstable windslab will continue to form, greatest accumulations being at the tops of steep North, North-East and East facing slopes and gullies above 1000m. Exposed old snow will be frozen and stable. The avalanche hazard will be Moderate.

Observed Avalanche Hazard - Sun 03/03/2019

Observed Weather Influences

Strong South-Westerly winds with snow showers above 800m.

Observed Snow Stability and Avalanche Hazard

The existing old snowpack has now refrozen and is stable. Fresh localised areas of unstable windslab have formed in areas sheltered from the South-West winds. Greatest accumulations are at the tops of sheltered North, North-Eats and East aspects above 1000m. The avalanche hazard is Moderate

Mountain Conditions

| | |
|-------------------------------------|--|
| Observed Mountain Travel Conditions | Cloud base was at 700 metres this morning, rising later. Winds approx 40 - 50 mph |
| Comments | A better day expected with light snow showers |
