

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 15/03/2019

Avalanche Problems

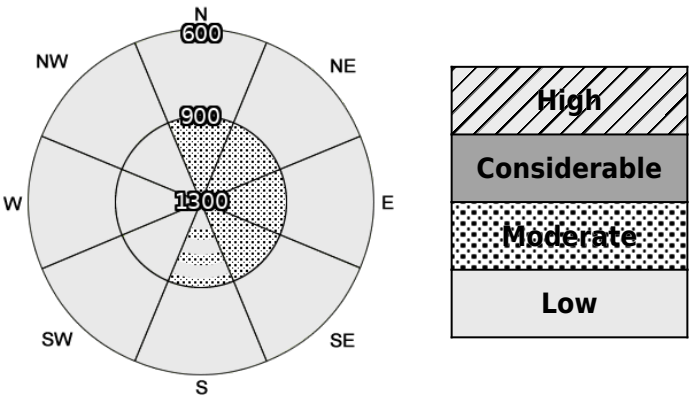

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The old snowpack will continue to consolidate at all levels. New accumulations of windslab will develop on Northerly through East to South-East aspects above 900 metres. Areas most affected will be gully tops, coire rims and crag aprons. Cornices will be unstable. Elsewhere stability will be generally good. The avalanche hazard will be Moderate.

Forecast Weather Influences

Strong Westerly winds will continue with snow showers throughout the forecast period. These will be heaviest during the early part of the day and early afternoon. The freezing level will steadily lower from 850 metres to 600 metres by the end of the day.

Comments

Wintry unsettled conditions continuing for the next few days. Good snow cover.
