

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 25/03/2019

Avalanche Problems

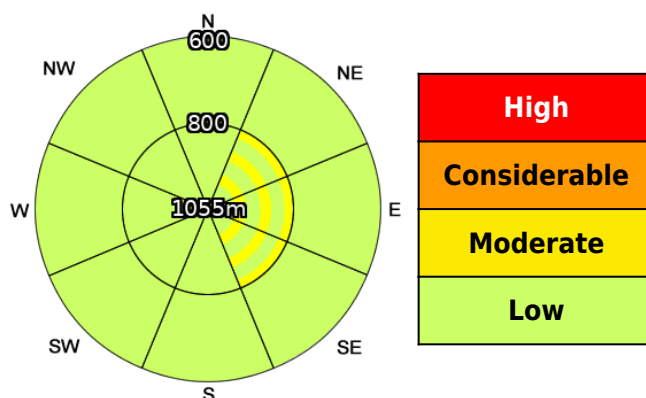

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to deplete at lower levels and be scoured on windward aspects. On wind sheltered aspects above 800 metres some isolated windslab instabilities will deepen. These will mainly be on North-East to South-East aspects above 800 metres affecting high terrain such as wind sheltered coire rims, scarp slopes and gully tops. The avalanche hazard will be Moderate.

Forecast Weather Influences

Gale force West-North-West winds will gradually ease overnight becoming fresh Westerly by the morning. There will be some light showers this evening, dying out overnight then further showers tomorrow afternoon. The freezing level will hover around 500-600 metres at first rising to about 1000 metres by the end of the day.

Comments

Very wet at lower levels. The freezing level remaining around 500-600 metres overnight and rising to 1000 metres by tomorrow afternoon.
