

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 26/03/2019 TO 18:00HRS Wed 27/03/2019**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

It will remain dry with the freezing level above the summits. Moderate summit winds.

**Forecast Snow Stability and Avalanche Hazard**

The snowpack will gradually consolidate and stabilise at all levels. Localised surface instabilities will remain on steep slopes otherwise snowpack stability will be generally good. Remaining cornices will be prone to collapse. The avalanche hazard will be Low

**Observed Avalanche Hazard - Tue 26/03/2019**

**Observed Weather Influences**

Strong South-Westerly winds with the freezing level above the summits

**Observed Snow Stability and Avalanche Hazard**

The snowpack is gradually consolidating at all levels. Localised surface instabilities are present, mainly on steep North, North-East and East aspects above 900m. Elsewhere, stability is generally good. The avalanche hazard is Moderate

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Wet snowpack  
Cloud base was around 700 metres for most of the day.

**Comments**

Hazard of falling ice and rocks from steep ground
