

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 28/03/2019

Avalanche Problems

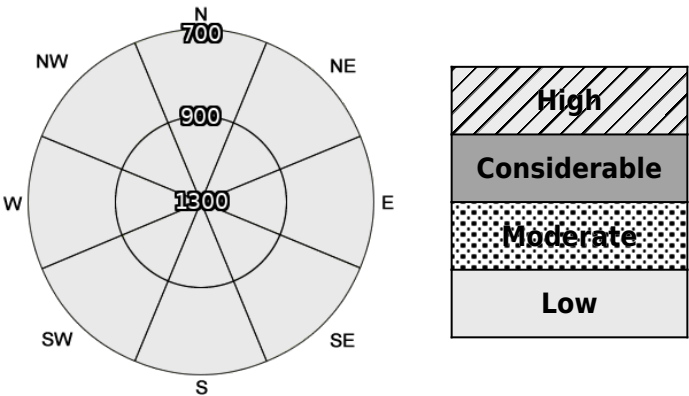

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to thaw in the mild conditions. Although soft in the surface layers in places and firm elsewhere it will remain generally stable. Greatest amounts lie on mostly North-East to South-Easterly aspects above 900 metres. Surface instabilities such as small sloughs and roller balls are likely on the steepest, especially Easterly facing slopes. Here also cornice remnants will be unstable. The avalanche hazard will be Low.

Forecast Weather Influences

Mild conditions will continue with freezing levels remaining above the summits. Dry throughout with Strong West-South-West winds backing South-Westerly and increasing strong to gale force through the day.

Comments

Rock and ice fall a potential hazard during the mild spell. Turning cooler at the weekend.
