

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Thu 28/03/2019 TO 18:00HRS Fri 29/03/2019

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

The freezing level will remain above the summits. It is expected to be dry for most of the period; drizzle arriving mid-afternoon. Winds will be strong South-Westerly, easing later.

Forecast Snow Stability and Avalanche Hazard

The snowpack will continue to slowly thaw and consolidate. Stability will be generally good. Remaining cornices will be unstable and prone to collapse. The avalanche hazard will be Low.

Observed Avalanche Hazard - Thu 28/03/2019

Observed Weather Influences

It was a dry day with the freezing level above the summits. Winds were moderate to strong mainly South-Westerly.

Observed Snow Stability and Avalanche Hazard

The snowpack is slowly thawing and consolidating at all levels. Stability is generally good. Remaining cornices are unstable. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	Thawing snow throughout. Cloud base was around 850m during the morning; lifting and breaking from midday. Winds 30 -40 mph, progress difficult and tiring, blowing us over on occasions
Comments	Rock and ice fall will continue to be a hazard in the thaw conditions.
