

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 07/04/2019

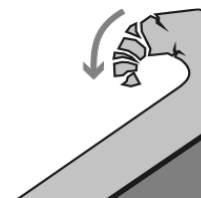

Avalanche Problems

Persistent Weak Layers

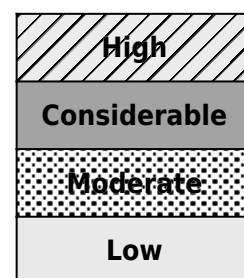

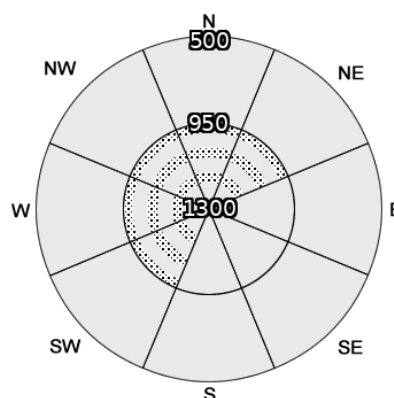

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to consolidate at all altitudes. Localised instabilities will persist within deeper accumulations on South-West through West to Northerly aspects mainly above 950 metres. Areas most affected will be at the top of steep slopes, gully exits and convexities. Unstable cornices which overhang these aspects will continue to be a hazard. The avalanche hazard will be Moderate.

Forecast Weather Influences

It is expected to be mostly dry with persistent hill fog and the odd patch of light rain or drizzle. Strong Easterly winds will ease to moderate during the night and veer to the East-North-East. The freezing level will be mainly above the summits with the potential for a sub-zero inversion just below the summits.

Comments

Ski or snow shoe a recommended form of travel.
