

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Mon 08/04/2019 TO 18:00HRS Tue 09/04/2019

| Hazard Level | Avalanche Probability |
|---------------------|--|
| Very High | Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected. |
| High | Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected. |
| Considerable | Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible. |
| Moderate | Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places. |
| Low | Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain. |

Forecast Weather Influences

It is expected to remain dry with the freezing level above the summits. Winds will be light East-South-Easterly.

Forecast Snow Stability and Avalanche Hazard

The snowpack will continue to slowly thaw and consolidate at all levels, and will generally be stable. Surface instabilities will be present on steep slopes, especially those exposed to solar radiation. Remaining cornices will be weak and prone to collapse. The avalanche hazard will be Low.

Observed Avalanche Hazard - Mon 08/04/2019

Observed Weather Influences

It was a dry day with the freezing level above the summits. Winds were moderate generally Easterly.

Observed Snow Stability and Avalanche Hazard

The snowpack continues to slowly thaw and consolidate at all levels, and is generally stable. Surface instabilities are present on steep slopes, especially those exposed to solar radiation. Remaining cornices are weak and prone to collapse. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

Moist thawing snowpack. Good visibility. Winds approx 10-20 mph.

Comments

Falling rocks and ice are a hazard in these thaw conditions.
