

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Fri 12/04/2019 TO 18:00HRS Sat 13/04/2019

| Hazard Level | Avalanche Probability |
|--------------|--|
| Very High | Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected. |
| High | Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected. |
| Considerable | Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible. |
| Moderate | Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places. |
| Low | Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain. |

Forecast Weather Influences

Moderate to strong South-Easterly winds. Remaining dry. After an overnight frost the freezing level will rise above the summits during the day.

Forecast Snow Stability and Avalanche Hazard

The snowpack will remain generally well bonded and stable. Some refreezing will occur overnight and further softening during the day, especially on slopes exposed to solar radiation. The avalanche hazard will be Low.

Observed Avalanche Hazard - Fri 12/04/2019

Observed Weather Influences

It was a dry day with moderate South-Easterly winds. The freezing level was above the summits.

Observed Snow Stability and Avalanche Hazard

The snowpack is generally well bonded and stable. The snow surface is soft where it is exposed to solar radiation. The avalanche hazard is Low.

Mountain Conditions

| | |
|-------------------------------------|---|
| Observed Mountain Travel Conditions | Spring snowpack. Good visibility. Winds approximately 20 mph. |
| Comments | Dry, settled conditions continuing. |
