

## THE AVALANCHE HAZARD WILL BE LOW

### Avalanche Hazard Forecast for Sunday 14/04/2019

#### Avalanche Problems

#### Forecast Snow Stability & Avalanche Hazard

The snowpack will remain tightly bonded and well stabilised in all locations. A trace of new wind blown snow is possible on some very sheltered North-West to North aspects but accumulations expected to be insignificant. The avalanche hazard will be Low.

#### Forecast Weather Influences

Very cold overnight at all levels. Strong South-Easterly winds throughout. A few very light snow showers are possible later in the day.

#### Comments

Don't forget your ice axe and crampons. Last report and forecast of the 2018/19 winter season.
