

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 14/12/2019

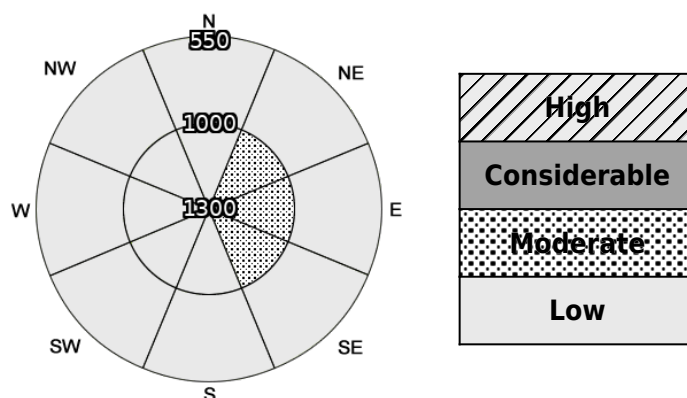

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Drifting snow at higher levels with localised windslab developing mainly above 1000 metres on North-East to South-East aspects. Here some instabilities will be present in steep sheltered areas especially around coire rims, gully exits, flanks and crag aprons. The avalanche hazard will be Moderate.

Forecast Weather Influences

Light snowfall above 500 metres throughout the forecast period on moderate to strong Westerly winds. The freezing level will steadily fall from 700 metres to 500 metres by the end of the day.

Comments

A thin rain crust overlies the snowpack at higher levels. Turning cooler during Saturday.
