

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sat 14/12/2019 TO 18:00HRS Sun 15/12/2019**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

Strengthening North-West winds overnight, backing, becoming fresh to strong South-West by the afternoon. Remaining cloudy throughout with occasional light showers during early morning, wintry above 300 metres. Cold, as the freezing level remains at around 400 metres.

**Forecast Snow Stability and Avalanche Hazard**

As snowfall amounts will be low and continuing cold, little change is expected. The snowpack will remain shallow throughout with most snow predominantly above 700 metres. Greatest accumulations will remain along ridge crests and flanks, around coire rims and in gullies, on West through North to East aspects. The avalanche hazard will be Low.

**Observed Avalanche Hazard - Sat 14/12/2019**

**Observed Weather Influences**

Multi-layered low cloud persisted throughout the day with occasional light showers drifting on a light North-West wind and wintry above 500 metres. Feeling cold as the freezing level lowered.

**Observed Snow Stability and Avalanche Hazard**

Little change observed in the general snowpack; shallow snow cover in most areas and aspects. Most snow exists along ridge crests and flanks, around coire rims and in gullies, mainly above 700 metres, West through North to East aspects. The avalanche hazard is Low.

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Shallow snow cover, snowline around 450m. A day of flat light and poor definition. Winds approximately 10mph or less.

**Comments**

Breakable crust exists at lower to mid levels. Deeper snow generally avoidable.
