Avalanche Hazard Forecast

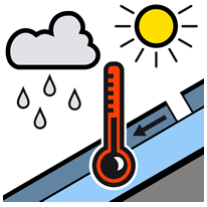

Issued 19/12/2019

FOR PERIOD 18:00HRS Thu 19/12/2019 TO 18:00HRS Fri 20/12/2019

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 20/12/2019

Avalanche Problems

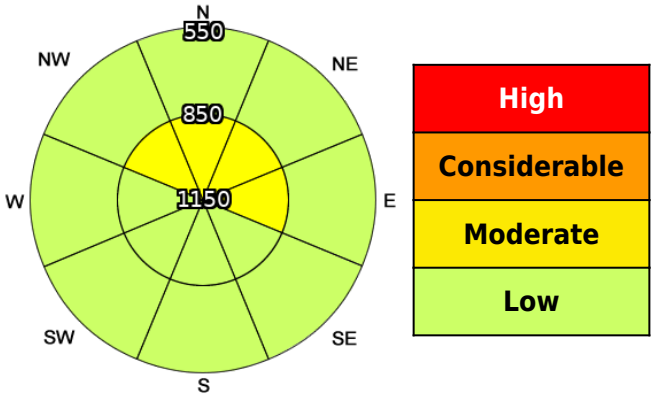

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to slowly thaw and consolidate. Localised wet snow instabilities will persist particularly on steeper aspects. North-West through North to East aspects above 850 metres mostly affected but particularly corrie rims, gully flanks and exits,. Cornices remain unstable and prone to collapse . The avalanche hazard will be Moderate.

Forecast Weather Influences

The freezing level will remain above the summits lowering slightly by late afternoon. Rain through most of the period, some sleet over the highest summits with a brief dry spell early afternoon. Winds will start out Easterly veering South-Westerly by the end of the day.

Comments

Getting slightly colder on Saturday, freezing level lowering to around 800-900 metres with more snow showers.
