Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 23/12/2019 TO 18:00HRS Tue 24/12/2019

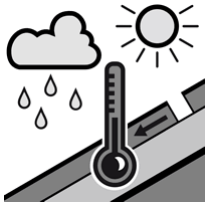

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 24/12/2019

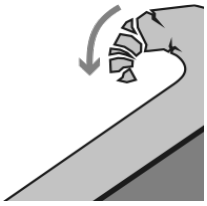

Avalanche Problems

Wind Slab

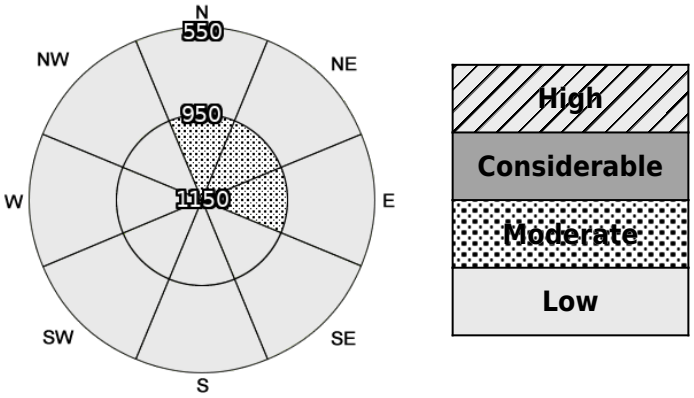

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Where any new snow deposits achieve depth they will be moderately stable. Areas most affected will be North to East aspects above 950 metres, in particular gully exits and coire rims. Elsewhere the snowpack will be generally well bonded and stable. Cornices unstable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Winds will be fresh mainly South-Westerly. The freezing level will fall to around 900 metres. Showers will be rain at most levels initially, falling as snow above 900 metres by dawn.

Comments

Outlook: Showers mainly dying out, mostly dry and frosty on Christmas Day. However, turning unsettled and milder on Boxing Day with strengthening South or South-East winds and outbreaks of rain with freezing level rising above the summits and a thaw of lying snow.
