Issued 28/12/2019

FOR PERIOD 18:00HRS Sat 28/12/2019 TO 18:00HRS Sun 29/12/2019

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 29/12/2019

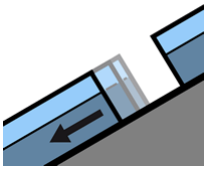

Avalanche Problems

Wet Snow

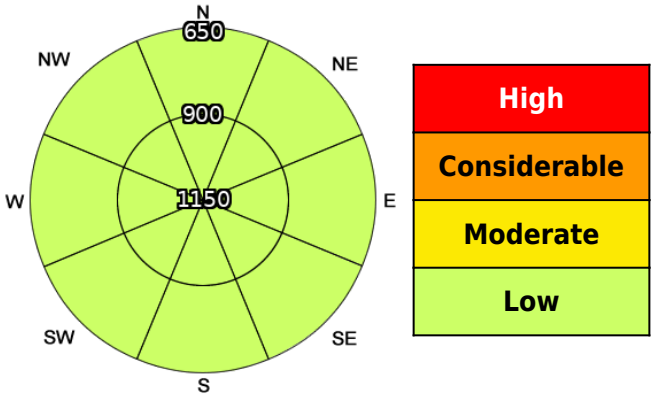

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

Wet snow instabilities will persist mainly on steep North to Easterly aspects above 950 metres. Gullies, coire rims, and scarp slopes will be most affected. Remaining cornices will be prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight, heavy rain with freezing levels well above the summits. Drier conditions are expected during the day. South-Westerly gales throughout the period.

Comments

Severe gales or storm force winds across the summits tonight and Sunday morning. Getting slightly colder on Monday.
