

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 31/12/2019 TO 18:00HRS Wed 01/01/2020**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

It will be a generally dry day with increasingly strengthening Southerly winds. The freezing level will be around summit level

**Forecast Snow Stability and Avalanche Hazard**

The existing snowpack will remain frozen and stable. Greatest accumulation will be in high North and East facing corries and gully lines. The avalanche hazard will be Low

**Observed Avalanche Hazard - Tue 31/12/2019**

**Observed Weather Influences**

It has been a dry day with light winds. Temperatures have fluctuated but the snowpack has remained frozen.

**Observed Snow Stability and Avalanche Hazard**

The snowpack is frozen and stable at all levels. Any significant accumulations are generally restricted to high North and East facing corries and gullies lines. The avalanche hazard is Low

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Snow is generally frozen underfoot  
Cold clear conditions  
Winds approx 10mph or less

**Comments**

Winds will gradually increase from the South throughout the period  
Happy New Year!
