

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 31/12/2019 TO 18:00HRS Wed 01/01/2020**

| Hazard Level        | Avalanche Probability  |
|---------------------|--|
| <b>Very High</b>    | Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.            |
| <b>High</b>         | Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected. |
| <b>Considerable</b> | Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.    |
| <b>Moderate</b>     | Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.                                       |
| <b>Low</b>          | Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.                            |

**Forecast Weather Influences**

Strong South-South-West winds. Mainly dry. Close to freezing at summit level.

**Forecast Snow Stability and Avalanche Hazard**

The snowpack will remain well bonded and generally stable. The snow surface should remain firm at higher elevations but start to soften lower down. The avalanche hazard will be Low.

**Observed Avalanche Hazard - Tue 31/12/2019**

**Observed Weather Influences**

It was a dry, sunny day with light South-Easterly winds. The freezing level rose above the summits after a cold night.

**Observed Snow Stability and Avalanche Hazard**

The patchy snowpack is frozen hard and is stable in all locations. The avalanche hazard is Low.

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Firm snow. Good visibility. Winds 10 - 20 mph.

**Comments**

Unsettled weather for the next few days.
