

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Thu 02/01/2020 TO 18:00HRS Fri 03/01/2020

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Temperatures will drop early in the period and there will be light snow showers. Winds will be moderate over the summits from a mainly Westerly direction, increasing later in the afternoon.

Forecast Snow Stability and Avalanche Hazard

The existing snowpack will refreeze and be generally well bonded and stable. Fresh windslab will begin to form mainly on sheltered North-East, East and South-East aspects above 1000 metres, notably corrie rims and scarp slopes, although accumulations are not expected to be significant. The avalanche hazard will be Low.

Observed Avalanche Hazard - Thu 02/01/2020

Observed Weather Influences

It has been a windy day with rain at all levels.

Observed Snow Stability and Avalanche Hazard

The snowpack continues to slowly thaw and consolidate at all levels. Snowpack stability is generally good. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

Strong winds and rain at all levels

Comments

Should be colder on Friday but with winds increasing during the afternoon
