Avalanche Hazard Forecast

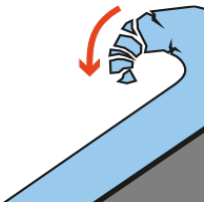

Issued 06/01/2020

FOR PERIOD 18:00HRS Mon 06/01/2020 TO 18:00HRS Tue 07/01/2020

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 07/01/2020

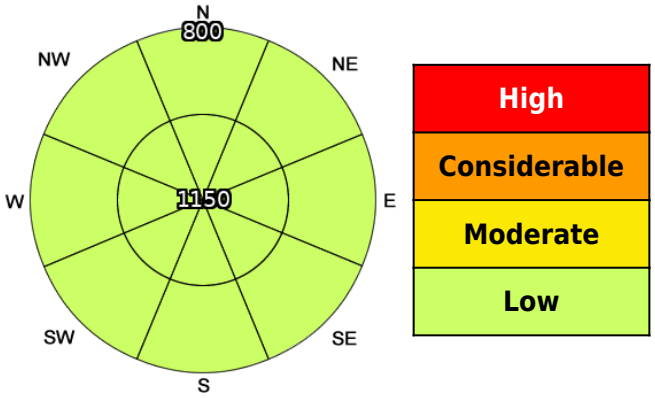

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

A brief period of new snow initially will form isolated pockets of windslab in sheltered locations such as summit gullies and corniced areas, these are not expected to be of significant depth and should generally be avoidable. A return to mild and wet conditions will render the snowpack soft and wet. Cornices will be suspect. The avalanche hazard will be Low.

Forecast Weather Influences

Dry and cooler conditions overnight will give way to mild wet and very windy conditions through the course of the day. A brief period of snow on the highest tops will be followed by heavy rain as the freezing level rises well above the summits. Winds in exposed locations will severe gale to storm force from the South veering South-West later.

Comments

Wild and wet today. Very wet and extremely windy conditions in exposed locations tomorrow.
