

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Tuesday 07/01/2020****Avalanche Problems****Forecast Snow Stability & Avalanche Hazard**

Any fresh overnight summit snow will quickly thaw by daybreak as the mild and wet weather arrives. Thereafter, the snow cover will continue to be limited to patches and strips of old snow above 850 metres around the higher summits. The old snow will remain wet, generally well consolidated and stable. The avalanche hazard will be Low.

**Forecast Weather Influences**

Largely dry overnight with easing Westerly winds. Perhaps the occasional localised shower, wintry around the summits. Very mild, wet and windy conditions will return by first light and persist through the day, with rain at all levels, storm force South-Westerly summit winds and the freezing level rocketing up to well above the highest tops.

Comments

Not a great day to be on the hill tomorrow, but cooler and brighter weather by midweek - and some summit snow!
