

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 07/01/2020 TO 18:00HRS Wed 08/01/2020**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

A return to colder conditions with snow showers above 600m. Strong South-West winds.

**Forecast Snow Stability and Avalanche Hazard**

The existing wet snowpack will refreeze and remain stable. Fresh areas of unstable windslab will form in wind sheltered locations. Greatest accumulations will be at the tops of North, North-East and East aspects above 900m. Other wind sheltered locations will also be affected. The avalanche hazard will be Moderate

**Observed Avalanche Hazard - Tue 07/01/2020**

**Observed Weather Influences**

Mild with rain at all levels and storm force winds over the summits

**Observed Snow Stability and Avalanche Hazard**

The remaining snowpack is continuing to thaw and consolidate at all levels. Main accumulations remain in high North and East facing corries. The avalanche hazard is Low

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Storm force winds today

**Comments**

Winds easing but still remaining strong over the summits. A return to colder conditions for a while!
