Avalanche Hazard Forecast

Issued 08/01/2020

FOR PERIOD 18:00HRS Wed 08/01/2020 TO 18:00HRS Thu 09/01/2020

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 09/01/2020

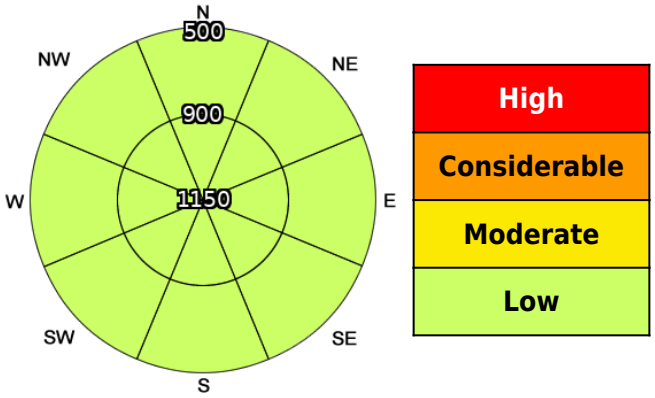

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised instabilities may persist as windslab begins to achieve depth on the old frozen snowpack. Greatest accumulations will be at the tops of sheltered gullies and scarp slopes mainly on North to Easterly aspects above 900 metres. Elsewhere, a thin cover of new snow will lie on bare ground and stability will be generally good. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight, light snow showers falling to around 400 metres with strong South-Westerly winds. It should then be a dry, cold day with winds easing to moderate and backing to the East then North returning to the West by the end of the day.

Comments

Instabilities isolated and avoidable. Thursday should be dry and maybe sunny! ..... with light winds. Then dry and clear overnight into Friday with freezing levels falling to 200-400 metres.
