

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 10/01/2020

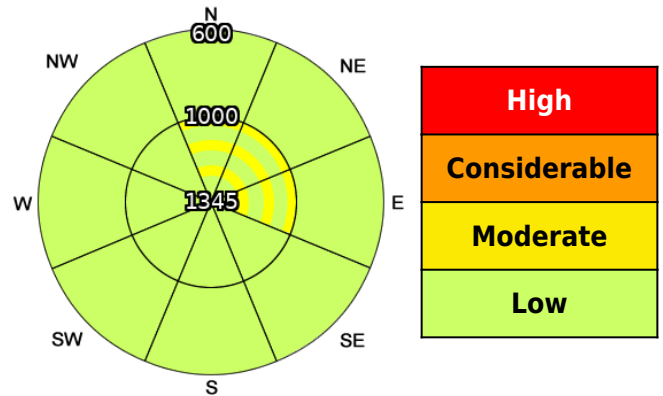

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised deposits of windslab will remain, mainly at the tops of steep North to East aspects above 1000 metres, notably coire rims and gully exits. Elsewhere the old snowpack is frozen and stable with a thin covering of fresh snow. The avalanche hazard will be Moderate.

Forecast Weather Influences

Winds will be mainly Southerly, initially light overnight gradually increasing to very Strong by the end of the day. It will be a dry day with the freezing level around 800 metres. Towards the end of the afternoon the freezing level will rise to 1000 metres and there will be a risk of showers.

Comments

Heavy rain forecast overnight on Friday and continuing for much of Saturday.
