

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Friday 10/01/2020****Avalanche Problems****Wind Slab****Forecast Snow Stability & Avalanche Hazard**

Localised accumulations of windslab will remain on North-East through East to South aspects above 700 metres. These will be around coire rims, wind sheltered crests and gully tops. These instabilities are shallow and generally avoidable. The avalanche hazard will be Low.

**Forecast Weather Influences**

Light South winds will become fresh West-South-West overnight, gradually increasing in strength to become strong gale force South-South-West by the late afternoon. There may be an occasional light shower early tomorrow morning, but it will be mainly dry for the day with only some light showers expected by the end of the period. The freezing level will hover around 600 metres, rising sharply to around 900 metres by the late afternoon.

Comments

Winter is back, a nice dry day on the hill.
