Forecast Snow Stability & Avalanche Hazard

New snow accumulations will continue to develop windslab in sheltered locations, where it gains depth, mainly on Northerly to Easterly aspects above 900 metres it will be poorly bonded. Sheltered locations such as coire headwalls, ridge flanks and gully exits will be particularly affected. Elsewhere a thin cover of new snow will lie on bare ground and stability will be generally good. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight, further light snow showers with strong South-Westerly winds, freezing level at around 500 metres. Dry for most of Monday morning, freezing level rising to around 1000 metres with precipitation falling as snow mainly above 900 metres in the afternoon. Winds will strengthen becoming gale force Southerlies.

Comments

Very windy tomorrow.
