

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 21/01/2020 TO 18:00HRS Wed 22/01/2020

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Moderate West-South-Westerly wind. Rain and drizzle overnight followed by a mainly dry day. The freezing level will be well above the summits.

Forecast Snow Stability and Avalanche Hazard

The snowpack will continue to slowly consolidate in the mild conditions. Localised wet snow instabilities will persist mainly on very steep North through East to South-East aspects above 900 metres. Elsewhere the snowpack will be generally stable. Remaining cornices will be prone to collapse. The avalanche hazard will be Low

Observed Avalanche Hazard - Tue 21/01/2020

Observed Weather Influences

Moderate South-Westerly winds and drizzly showers. The freezing level was well above the summits.

Observed Snow Stability and Avalanche Hazard

The snowpack continues to slowly consolidate in the mild conditions. Localised wet snow instabilities persist mainly on steep North through East to South-East aspects above 900 metres. Elsewhere the snowpack is generally stable. Remaining cornices are prone to collapse. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

Wet thawing snowpack. Poor visibility above 800 metres. Winds 20-30 mph.
