

## Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Wed 22/01/2020 TO 18:00HRS Thu 23/01/2020

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

### Forecast Weather Influences

Strong South-Westerly winds. After a mainly dry night light rain showers will develop from mid morning. The freezing level will be above the summits.

### Forecast Snow Stability and Avalanche Hazard

The snowpack will continue to thaw and diminish and be generally stable. Most snow can be found on North through East to South-East aspects above 750 metres, particularly gully tops, coire rims and ridge flanks. Much of the terrain is bare of snow. The avalanche hazard will be Low.

## Observed Avalanche Hazard - Wed 22/01/2020

### Observed Weather Influences

It was a damp day with light South-Westerly winds. The freezing level was well above the summits.

### Observed Snow Stability and Avalanche Hazard

The wet snowpack is thawing, consolidating and generally stable. Largest areas of snow cover can be found on North to South-East aspects above 750 metres, particularly gullies, core rims and ridge flanks. Much of the terrain is bare of snow. The avalanche hazard is Low.

### Mountain Conditions

#### Observed Mountain Travel Conditions

Diminishing snowpack. Cloudy on the tops. Winds approx 10 - 20 mph.

#### Comments

Getting colder at the weekend.
