Avalanche Hazard Forecast

Issued 26/01/2020

FOR PERIOD 18:00HRS Sun 26/01/2020 TO 18:00HRS Mon 27/01/2020

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 27/01/2020

Avalanche Problems

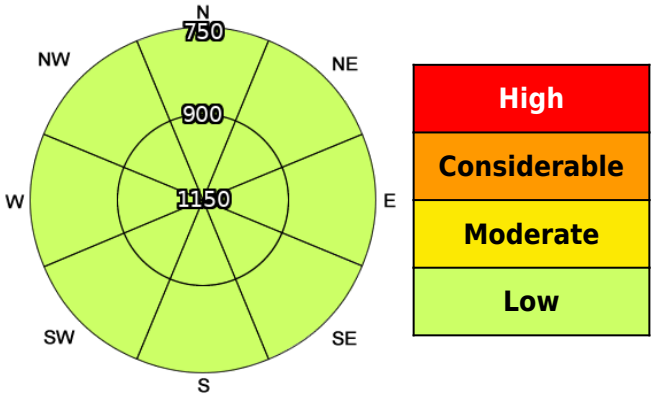

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Poorly bonded windslab will form mainly on North-West through North to East aspects above 900 metres, some of these deposits are expected to be localised. However, steep, wind sheltered locations such as gully exists, corrie rims and ridge flanks will be particularly affected. Fragile cornices will form above these aspects. The old snowpack will be firm and stable. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will be around 500 metres through the period. After a mainly dry night snow showers will fall to lower levels through the day accompanied by strong Southerly winds.

Comments

Changeable wintry conditions for next few days. West to South-West winds strong to gale force occasional blizzard conditions expected across higher peaks.
