

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Tuesday 28/01/2020****Avalanche Problems****Wind Slab****Persistent Weak Layers****Cornices****Forecast Snow Stability & Avalanche Hazard**

Unstable wind slab instabilities will be present and continue to build in depth and extent on North-West through North to East aspects above 700 metres. Some cross loading can be expected. Wind sheltered coire rims, ridge flanks and the tops of gullies being particularly effected. Cornices will continue to build and become fragile on the same aspects. Elsewhere the snow cover will deepen with wind exposed terrain features liable to some scouring. The avalanche hazard will be Moderate

**Forecast Weather Influences**

Strong South-South-West winds will continue overnight becoming fresh Southerly. There will be some variability by the morning then winds will increase in strength becoming strong South-West by the late afternoon. There will be heavy snow showers throughout the period. The freezing level will lower to 150 metres overnight then rise gradually to 600 metres by the afternoon.

Comments

A day of very poor visibility. Heavy snow showers continuing.
