

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 01/02/2020

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The remaining moist but stable snowpack, mainly on North to East aspects above 800 metres will refreeze during the day. As the morning progresses small amounts of new snow will begin to accumulate in sheltered locations, predominantly on bare ground and mainly on East to South aspects above 750 metres. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will be above the tops overnight before dropping to summit levels by mid morning as the strong South-West winds veer North-Westerly and ease in strength. Overnight showers will be of sleet on the summits turning to snow during the day as the temperature drops.

Comments

Very mild day, midday temperature at sea level 11.4C. Ridges mostly free of snow today. Colder conditions on Saturday with a little snow high up.
