Avalanche Hazard Forecast

Issued 04/02/2020

FOR PERIOD 18:00HRS Tue 04/02/2020 TO 18:00HRS Wed 05/02/2020

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 05/02/2020

Avalanche Problems

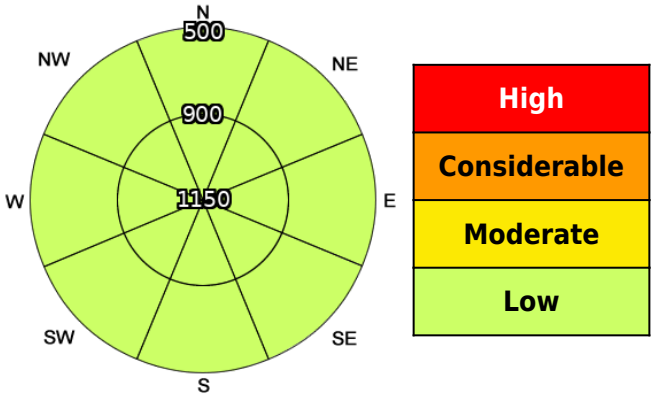

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised pockets of poorly bonded windslab will persist mainly on North to East aspects above 900 metres. Wind sheltered steep locations such as coire rims, gully exits and ridge flanks above 900 metres will be most affected. Cornices above similar aspects are fragile. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will rise above the summits early in the morning. A ridge of high pressure will maintain a brisk Westerly flow with generally dry, settled conditions. Winds will be fresh to strong from a West-South-Westerly direction.

Comments

Outlook for the next 48 hrs
Outlook: Little change with a ridge of high pressure continuing maintaining the relatively settled weather. Freezing level lowering late Thursday, before lifting again Friday.
