

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Thu 06/02/2020 TO 18:00HRS Fri 07/02/2020**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

It will be dry with the freezing level gradually lowering to 500m. Winds will gradually increase from the South-East

**Forecast Snow Stability and Avalanche Hazard**

The snowpack will remain frozen and stable at all levels. Some surface softening may occur on slopes exposed to solar radiation. The avalanche hazard will be Low

**Observed Avalanche Hazard - Thu 06/02/2020**

**Observed Weather Influences**

It has been dry with light summit winds. The freezing level is above the summits, although the snow surface remains frozen due to dry air.

**Observed Snow Stability and Avalanche Hazard**

The snowpack is now generally well bonded and stable. Surface rime is present on many aspects above 1000m with some softening in the sun. At lower elevations the snowpack has refrozen. The avalanche hazard is Low

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Dry and clear over the summits with some mid level cloud at times.

**Comments**

Weather deteriorating again over the weekend
